

METHOD AND APPARATUS FOR DISTRIBUTED COMPUTATION USING VEHICLE COMPUTERS

A method, apparatus, and computer implemented
10 instructions for distributed computing in a data
processing system located in a vehicle. Monitoring for a
condition in which processing resources are available in
the data processing system is performed. In response to
detecting the condition, processing of a work unit is
15 initiated to generate a result. The result is
transmitted to a target data system in a remote location.
